**2005 Paper 1 Question 4**

**Operating Systems**

($a$)  What is the *address binding* problem?                                [1 mark]

($b$)  The address binding problem can be solved at compile time, load time or run time. For *each* case, explain what form the solution takes, and give *one* advantage and *one* disadvantage.                                [3 marks each]
