

Skype calls from SC01

Switch on the TV using the rightmost button on the bottom edge.

The Skype box and speakers are left on.

Click OK on the small Logitech remote to wake the Skype box

If necessary, select input HDMI1 using the leftmost button on the bottom edge of the TV

The Skype user is COMPUTER_LAB_SC01

It is much easier to ask the remote end to send a connect invitation. Once the invitation has been sent, acknowledge it on the contacts menu (second one down).

The settings menu (bottom one) allows you to pan and zoom the camera.

Please don't change other settings.

The microphones are built into the Skype box, on the top edge. They seem to work OK in SC01. Note that the conference phone on the table is completely independent of the Skype box.

Known issues

The clock is wrong and there is no way to set it.
