

# Programming Statements

The statements you've been acting out so far are for creating a sequence simple of sounds which is useful for creating rhythms. Can you think of some of your own statements that could be acted out by someone else for other tasks? The trick is to be able to make your program clear enough so that it is possible for the other person to act out the statements and do the correct thing without you explaining it first.

## ***Have a Go!***

Try and write your own simple program for someone else to act out:

	<b>Program Name:</b>
	1
	2
	3
	4
	5
	6
	7
	8

*(feel free to turn the page over and continue there...)*
