Building an Internet Router (P33)
Handout 1

1

Some logistics

Web page: <http://www.cl.cam.ac.uk/teaching/current/P33/>

TAs:

Malcolm Scott (Hardware) malcolm.scott@cl.cam.ac.uk
Chris Smowton (Software) chris.smowton@cl.cam.ac.uk

Hot-spare TAs:

Lech Swirski ls426@cl.cam.ac.uk
Jonathan Woodruff jdw57@cl.cam.ac.uk

Meta TA:

Muhammad Shahbaz muhammad.shahbaz@cl.cam.ac.uk

Grades:

Mphil (ACS) – Pass / Fail - based on a mark out of 100
All others (DTC) – Mark out of 100

What is Routing?

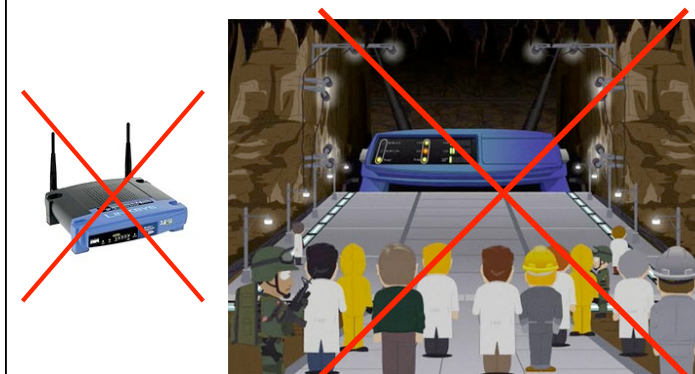

What is Routing?

What is Routing?

What a Router Looks Like

What a Router Looks Like

Basic Architectural Components of an IP Router

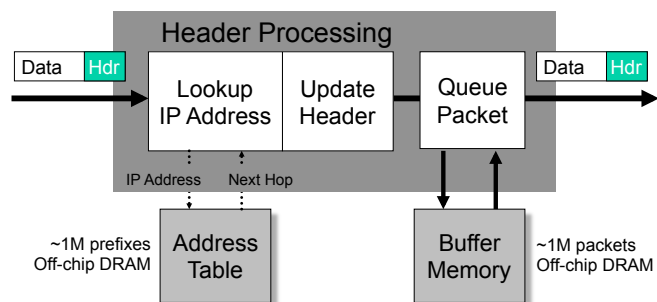

9

Per-packet processing in an IP Router

1. Accept packet arriving on an incoming link.
2. Lookup packet destination address in the forwarding table, to identify outgoing port(s).
3. Manipulate packet header: e.g., decrement TTL, update header checksum.
4. Send packet to the outgoing port(s).
5. Buffer packet in the queue.
6. Transmit packet onto outgoing link.

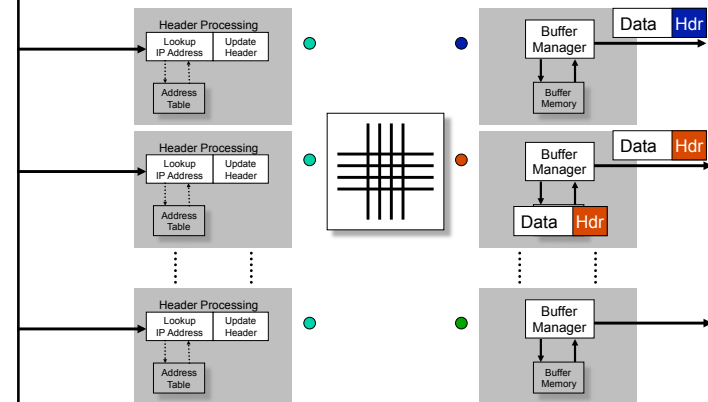

10

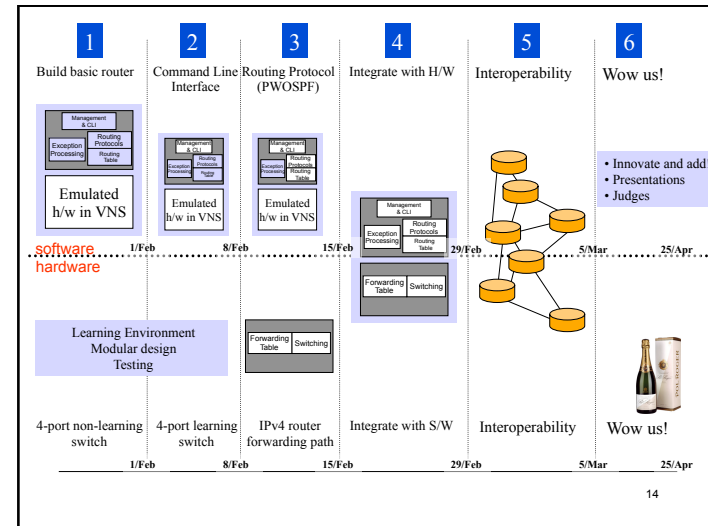

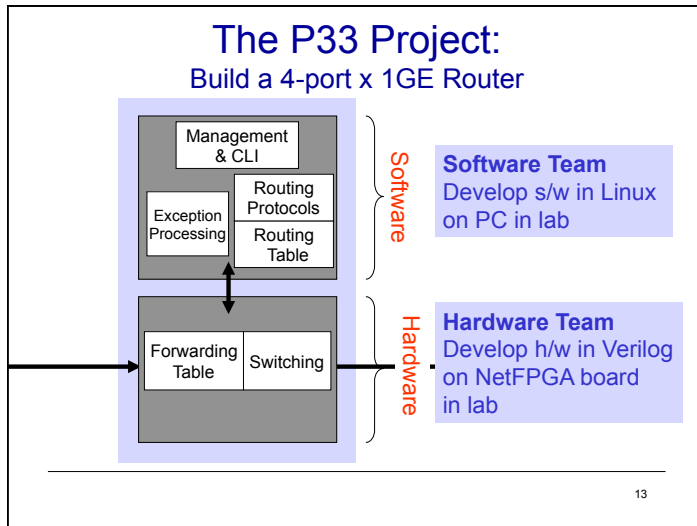

Generic Router Architecture

11

Generic Router Architecture

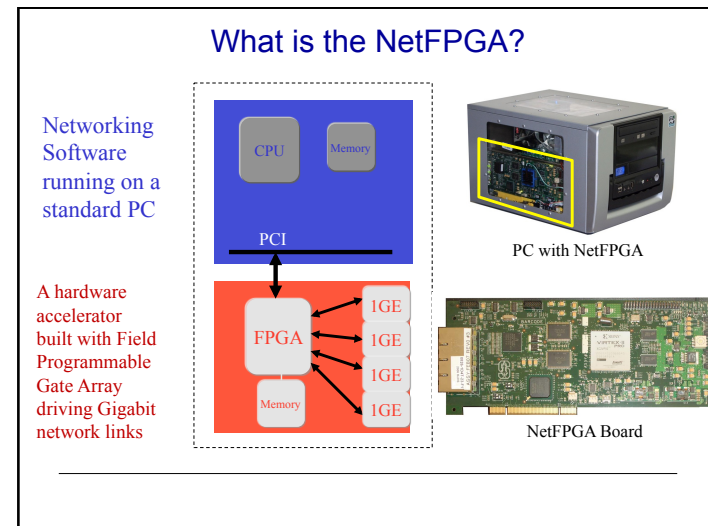

P33 Final presentations and demonstrations

Judges come from industry (Cisco, Redgate, Ensoft, Zeus)

Open invitation

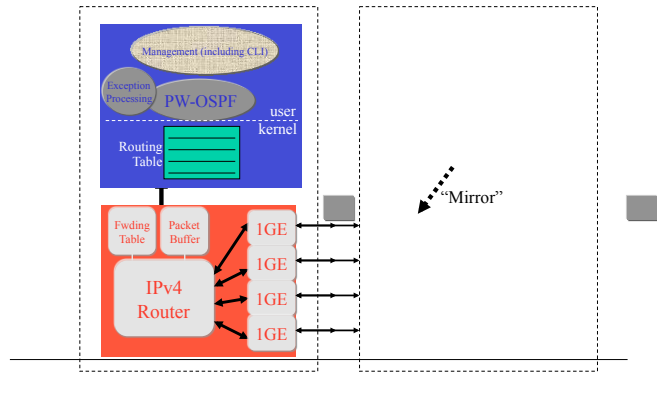

10 Marks for each group and a *best in show* prize

Michaelmas 2010 Building an Internet Router (P33) Handout 1 15

Running the Router Kit

User-space development, 4x1GE line-rate forwarding

Using the nf-test machines

- ❖ Each group is allocated an nf-test machine
(nf-test1, nf-test2, nf-test3, ...) .nf.cl.cam.ac.uk
- ❖ These machines are headless (no KVM) and located in SW02 (alcove)
- ❖ Login via ssh; set your own password and go
We suggest running "vncserver" and then using "vncviewer"; as a useful way to leave jobs/desktop running and reconnect if you need to move location. ("screen" is another alternative)
- ❖ SW02 is a busy classroom – please respect others
If you need to gain physical access to an nf-test machine
Do it quietly! You may be refused entry – don't take it personally.

nf-test machine *rules*

- ❖ Abuse the machines – that's the end of this module for you – zero tolerance policy.
- ❖ only connect eth0 to the cisco (access) switch
- ❖ these machines run a firewall for a reason
 - if it doesn't work for you, lets fix the rules
- ❖ Play nicely with each other; your interoperability marks depend on it.

nf-test machine *information*

- ❖ **Warning:** Files stored on nf-test machines are *not* backed up - and may be lost at any time.
- ❖ You must make sure that you regularly copy your files into your REAL (computer laboratory) home directory as a back-up
- ❖ **Machines fail** – they usually fail 24 hours **before** the big deadline!

Next steps

- ❖ Explore the web page

<http://www.cl.cam.ac.uk/teaching/current/P33/>

Hardware: do the online tutorial <http://www-netfpga.cl.cam.ac.uk>

Software: explore the vns system <http://vns.cl.cam.ac.uk>

<https://www.srg.cl.cam.ac.uk/vns/vns-assignments/simple-router/>

- ❖ Decide if you still want to take the class - promptly

- ❖ Build a team of 2 people: 1 s/w and 1 h/w

We will stay now and help you decide what you are

- ❖ Come to SW02 on Monday 2pm...
