

1999 Paper 5 Question 3

Digital Communication I

Compare packet switching and circuit switching with particular reference to the following issues:

- (a) how multiplexing is performed in each
- (b) how addressing is performed in each
- (c) functions which must be performed by a switch in each case
- (d) situations in which each is advantageous [15 marks]

“As communication bandwidth becomes less and less expensive, the efficiency of packet switching will become less important than the simplicity of implementation and guarantees offered by circuit switching.” Discuss. [5 marks]
