2001 Paper 13 Question 13

Complexity Theory

- (a) Show that any language that can be accepted by a nondeterministic machine in time f(n) can also be decided by a deterministic machine in space O(f(n)). [4 marks]
- (b) Show that any language that can be accepted by a nondeterministic machine in space f(n) can also be decided by a deterministic machine in time $O(c^{(f(n)+\log n)})$, for some constant c. [6 marks]
- (c) Explain what the above results tell us about the inclusion relationships among the complexity classes:

NL, co-NL, P, NP, PSPACE and NPSPACE

[4 marks]

(d) It has been proved that the graph reachability problem is in co-NL. What further inclusions can you derive among the above complexity classes using this fact? Explain your answer.[6 marks]
