2005 Paper 3 Question 3

Artificial Intelligence I

- (a) What are the advantages and disadvantages of constraint satisfaction problem (CSP) solvers compared with search algorithms such as A^* search, etc?

 [3 marks]
- (b) Give a general definition of a CSP. Define the way in which a solution is represented and what it means for a solution to be *consistent* and *complete*.

 [5 marks]
- (c) Assuming discrete binary constraints and finite domains, explain how breadth-first-search might be used to find a solution and why this is an undesirable approach. [3 marks]
- (d) Give a brief description of the basic backtracking algorithm for finding a solution. [4 marks]
- (e) Describe the minimum remaining values heuristic, the degree heuristic and the least constraining value heuristic. [5 marks]
