The attribute numbers in table I are wrong. Replace the table with

<table>
<thead>
<tr>
<th>Number</th>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>class</td>
<td>The class of the device</td>
</tr>
<tr>
<td>2</td>
<td>address</td>
<td>Device MAC address</td>
</tr>
<tr>
<td>3</td>
<td>name</td>
<td>Device name</td>
</tr>
<tr>
<td>4</td>
<td>services</td>
<td>The list of services offered by the device</td>
</tr>
</tbody>
</table>

Lower down on page 2, replace the description of the attribute combination notation with

We write $x$ as a number using the bits from column 1 of Table I that correspond to the attributes of interest: \{class, name\} is thus combination $1010_2$ or 10.
