Founded in the Autumn of 2017, LexSnap (www.lexsnap.com) is a legal services platform that rapidly delivers cost-efficient answers to legal questions relating to family law. By combining legal knowledge, sourced directly from lawyers who are experts in their fields, with the use of algorithms, LexSnap can make the provision of immediate and affordable legal service a reality.

Many common legal queries can be answered very quickly by an experienced solicitor, but much time and money are often wasted securing a solicitor to consult or identifying the relevant legal question. LexSnap eliminates this middle step with the affordable and instantly available answers compiled by a solicitor, which address many of the most common issues in the family law sphere. To do this, the appropriate content from the LexSnap knowledge base is matched to the customer's query by algorithms, using natural language processing and deep learning.

To assist our Company with developing its legal knowledge database in several areas of law and implementing some features of A.I., working with junior lawyers, **we are looking for bright and enthusiastic computer science students having outstanding academic credentials and particular interest for natural language processing techniques**.

We are offering a summer internship for a period of July-August 2019 at interesting remuneration conditions and in a young and dynamic start-up environment in London. Our offices are located in the Barclays Eagle Labs Notting Hill legal tech incubator. During the internship, you will be working on our legal Q&A platform, expanding the knowledge database in different areas of law and working closely with the lawyers on a new legal research tool.

If you are interested, please send your CV and motivation letter to tetiana@lexsnap.com by **Friday, 12 April 2019.**
