# Finding optimal T-count is NP-hard, so we need heuristics.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

T-count optimization

# Finding optimal T-count is NP-hard, so we need heuristics.

Existing heuristics fall basically in two categories.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Adjacent T gates become Clifford:

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Adjacent T gates become Clifford:

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

 $\Rightarrow$  By making T gates adjacent, we can decrease T count.

Adjacent T gates become Clifford:

 $\Rightarrow$  By making T gates adjacent, we can decrease T count.

Adjacent T gates become Clifford:

 $\Rightarrow$  By making T gates adjacent, we can decrease T count.

And loads more ...

#### Method 2: Phase Polynomials

Circuits built out of CNOT and T gates can be written as

$$U |\mathbf{x}\rangle = e^{i \frac{\pi}{4} g(\mathbf{x})} |f_1(\mathbf{x}), \dots, f_n(\mathbf{x})\rangle$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

where  $\mathbf{x} \in \mathbb{Z}_2^n$  is a binary vector,  $g : \mathbb{Z}_2^n \to \mathbb{Z}_8$  is a polynomial and  $f_i : \mathbb{Z}_2^n \to \mathbb{Z}_2$  are  $\mathbb{Z}_2$ -linear functions.

#### Method 2: Phase Polynomials

Circuits built out of CNOT and T gates can be written as

$$U |\mathbf{x}\rangle = e^{i \frac{\pi}{4} g(\mathbf{x})} |f_1(\mathbf{x}), \dots, f_n(\mathbf{x})\rangle$$

where  $\mathbf{x} \in \mathbb{Z}_2^n$  is a binary vector,  $g : \mathbb{Z}_2^n \to \mathbb{Z}_8$  is a polynomial and  $f_i : \mathbb{Z}_2^n \to \mathbb{Z}_2$  are  $\mathbb{Z}_2$ -linear functions.

 $\Rightarrow$   $\;$  Using this translation, we can make interesting simplifications

#### Method 2: Phase Polynomials

Circuits built out of CNOT and T gates can be written as

$$U |\mathbf{x}\rangle = e^{i \frac{\pi}{4} g(\mathbf{x})} |f_1(\mathbf{x}), \dots, f_n(\mathbf{x})\rangle$$

where  $\mathbf{x} \in \mathbb{Z}_2^n$  is a binary vector,  $g : \mathbb{Z}_2^n \to \mathbb{Z}_8$  is a polynomial and  $f_i : \mathbb{Z}_2^n \to \mathbb{Z}_2$  are  $\mathbb{Z}_2$ -linear functions.

 $\Rightarrow$   $\;$  Using this translation, we can make interesting simplifications

(but optimal T-count finding still seems to be in NP)

# Using commutation, cancellation and phase polynomials, a lot of progress can be made...

#### Limitations

Using commutation, cancellation and phase polynomials, a lot of progress can be made...

...but there is an obvious limitation:

Convert diagram into graph-like diagram.

- Convert diagram into graph-like diagram.
- Remove all internal  $\pm \pi/2$  spiders by local complementation.

- Convert diagram into graph-like diagram.
- Remove all internal  $\pm \pi/2$  spiders by local complementation.

・ロト・日本・モート モー うへぐ

• Remove all connected internal  $a\pi$  spiders by pivoting.

- Convert diagram into graph-like diagram.
- Remove all internal  $\pm \pi/2$  spiders by local complementation.
- Remove all connected internal  $a\pi$  spiders by pivoting.
- Remove internal aπ spider connected to boundary by unfusing and pivoting:

- Convert diagram into graph-like diagram.
- Remove all internal  $\pm \pi/2$  spiders by local complementation.
- Remove all connected internal  $a\pi$  spiders by pivoting.
- Remove internal aπ spider connected to boundary by unfusing and pivoting:

 If the original diagram was Clifford, then the simplified diagram has no internal spiders

#### Clifford example

Recall the example Clifford diagram:

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

#### Clifford example

Recall the example Clifford diagram:

・ロト ・ 理 ト ・ ヨ ト ・ ヨ ト ・ ヨ

This can be reduced by the described procedure to:

# $\mathsf{Clifford}{+}\mathsf{T} \mathsf{ example}$

### Clifford+T example

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Question: How do we turn this into a circuit.

### Clifford+T example

▲□▶ ▲圖▶ ▲臣▶ ▲臣▶ ―臣 … のへで

Question: How do we turn this into a circuit. Answer: We use the fact that it has a gFlow.

Informally, a gFlow associates an 'arrow of time' with a graph. Circuits have a gFlow.

Informally, a gFlow associates an 'arrow of time' with a graph. Circuits have a gFlow.

Proposition

Local complementation and pivoting preserve gFlow

Informally, a gFlow associates an 'arrow of time' with a graph. Circuits have a gFlow.

#### Proposition

Local complementation and pivoting preserve gFlow

#### Theorem

There is an efficient procedure that transforms a ZX-diagram with a gFlow into a circuit.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

### The simplification procedure

 We indeed have a circuit-to-circuit simplification procedure using the ZX-calculus.

• It reduces Clifford circuits to a quasi normal-form.

### The simplification procedure

- We indeed have a circuit-to-circuit simplification procedure using the ZX-calculus.
- It reduces Clifford circuits to a quasi normal-form.
- But: T gates never get removed by lcomp and pivoting.
