Contents

1	Linear Algebra	27
1.1	L2 Norm	27
1.2	Inner Product Spaces and Gradient Derivative	29
1.2.1	Real inner product spaces	30
1.2.2	Class instances	35
1.2.3	Gradient derivative	37
1.3	Cartesian Products as Vector Spaces	39
1.3.1	Product is a Module	39
1.3.2	Product is a Real Vector Space	40
1.3.3	Product is a Metric Space	41
1.3.4	Product is a Complete Metric Space	51
1.3.5	Product is a Normed Vector Space	52
1.3.6	Product is Finite Dimensional	56
1.4	Finite-Dimensional Inner Product Spaces	57
1.4.1	Interlude: Some properties of real sets	57
1.4.2	Type class of Euclidean spaces	58
1.4.3	Subclass relationships	62
1.4.4	Class instances	62
1.4.5	Locale instances	65
1.5	Elementary Linear Algebra on Euclidean Spaces	66
1.5.1	More interesting properties of the norm	67
1.5.2	Substandard Basis	68
1.5.3	Orthogonality	69
1.5.4	Orthogonality of a transformation	71
1.5.5	Bilinear functions	72
1.5.6	Adjoint	73
1.5.7	Euclidean Spaces as Typeclass	74
1.5.8	Linearity and Bilinearity continued	75
1.5.9	We continue	78
1.5.10	Infinity norm	83
1.5.11	Collinearity	87
1.5.12	Properties of special hyperplanes	89
1.5.13	Orthogonal bases and Gram-Schmidt process	91

1.5.14	Decomposing a vector into parts in orthogonal subspaces	94
1.5.15	Linear functions are (uniformly) continuous on any set	100
1.5.16	Topological properties of linear functions	100
1.6	Affine Sets	101
1.6.1	Affine set and affine hull	102
1.6.2	Affine Dependence	113
1.6.3	Some Properties of Affine Dependent Sets	116
1.6.4	Affine Dimension of a Set	120
1.7	Convex Sets and Functions	129
1.7.1	Convex Sets	130
1.7.2	Explicit expressions for convexity in terms of arbitrary sums	133
1.7.3	Convex Functions on a Set	135
1.7.4	Arithmetic operations on sets preserve convexity	141
1.7.5	Convexity of real functions	150
1.7.6	Convexity of the generalised binomial	154
1.7.7	Some inequalities: Applications of convexity	154
1.7.8	Misc related lemmas	156
1.7.9	Cones	157
1.7.10	Connectedness of convex sets	159
1.7.11	Convex hull	160
1.7.12	Relations among closure notions and corresponding hulls	169
1.7.13	Caratheodory's theorem	170
1.7.14	Some Properties of subset of standard basis	173
1.7.15	Moving and scaling convex hulls	173
1.7.16	Convexity of cone hulls	173
1.8	Conic sets and conic hull	174
1.9	Convex cones and corresponding hulls	178
1.9.1	Radon's theorem	182
1.9.2	Helly's theorem	184
1.9.3	Epigraphs of convex functions	186
1.9.4	A bound within a convex hull	187
1.10	Definition of Finite Cartesian Product Type	188
1.10.1	Finite Cartesian products, with indexing and lambdas .	189
1.10.2	Cardinality of vectors	189
1.10.3	Group operations and class instances	191
1.10.4	Basic componentwise operations on vectors	193
1.10.5	Real vector space	194
1.10.6	Topological space	194
1.10.7	Metric space	197
1.10.8	Normed vector space	199
1.10.9	Inner product space	201
1.10.10	Euclidean space	201

1.10.11	A naive proof procedure to lift really trivial arithmetic stuff from the basis of the vector space	203
1.10.12	Some frequently useful arithmetic lemmas over vectors	205
1.10.13	Matrix operations	208
1.10.14	Inverse matrices (not necessarily square)	213
1.11	Linear Algebra on Finite Cartesian Products	214
1.11.1	Type $(\text{'a'}, \text{'n'})$ <i>vec</i> and fields as vector spaces	215
1.11.2	Some interesting theorems and interpretations	222
1.11.3	Rank of a matrix	223
1.11.4	Lemmas for working on $\text{real}^{1/2/3/4}$	227
1.11.5	The collapse of the general concepts to dimension one	228
1.11.6	Routine results connecting the types $(\text{real}, 1)$ <i>vec</i> and <i>real</i>	228
1.11.7	Explicit vector construction from lists	229
1.11.8	lambda skolemization on cartesian products	230
1.11.9	Explicit formulas for low dimensions	232
1.11.10	Orthogonality of a matrix	232
1.11.11	Finding an Orthogonal Matrix	234
1.11.12	Scaling and isometry	235
1.11.13	Induction on matrix row operations	237
1.12	Traces and Determinants of Square Matrices	242
1.12.1	Trace	242
1.12.2	Relation to invertibility	257
1.12.3	Cramer's rule	261
1.12.4	Rotation, reflection, rotoinversion	263
1.13	Operators involving abstract topology	266
1.13.1	General notion of a topology as a value	266
1.13.2	The discrete topology	270
1.13.3	Subspace topology	271
1.13.4	The canonical topology from the underlying type class	275
1.13.5	Basic "localization" results are handy for connectedness.	276
1.13.6	Derived set (set of limit points)	279
1.13.7	Closure with respect to a topological space	281
1.13.8	Frontier with respect to topological space	290
1.13.9	Locally finite collections	294
1.13.10	Continuous maps	297
1.13.11	Open and closed maps (not a priori assumed continuous)	305
1.13.12	Quotient maps	314
1.13.13	Separated Sets	322
1.13.14	Homeomorphisms	324
1.13.15	Relation of homeomorphism between topological spaces	333
1.13.16	Connected topological spaces	334
1.13.17	Compact sets	343
1.13.18	Embedding maps	351

1.13.19	Retraction and section maps	353
1.13.20	Continuity	355
1.13.21	Half-global and completely global cases	356
1.13.22	The topology generated by some (open) subsets	360
1.13.23	Topology bases and sub-bases	361
1.13.24	Continuity via bases/subbases, hence upper and lower semicontinuity	365
1.13.25	Pullback topology	369
1.13.26	Proper maps (not a priori assumed continuous)	371
1.13.27	Perfect maps (proper, continuous and surjective)	376
1.14	F -Sigma and G -Delta sets in a Topological Space	377
1.15	Disjoint sum of arbitrarily many spaces	382
2	Topology	387
2.1	Elementary Topology	387
2.1.1	Topological Basis	388
2.1.2	Countable Basis	390
2.1.3	Polish spaces	399
2.1.4	Limit Points	399
2.1.5	Interior of a Set	404
2.1.6	Closure of a Set	408
2.1.7	Frontier (also known as boundary)	411
2.1.8	Filters and the “eventually true” quantifier	412
2.1.9	Limits	412
2.1.10	Compactness	416
2.1.11	Cartesian products	428
2.1.12	Continuity	430
2.1.13	Homeomorphisms	432
2.1.14	On Linorder Topologies	436
2.1.15	nhdsin and atin	438
2.1.16	Limits in a topological space	440
2.1.17	Pointwise continuity in topological spaces	443
2.1.18	Combining theorems for continuous functions into the reals	444
2.2	Non-Denumerability of the Continuum	446
2.2.1	Abstract	446
2.3	Abstract Topology 2	450
2.3.1	Closure	453
2.3.2	Frontier	454
2.3.3	Compactness	454
2.3.4	Continuity	455
2.3.5	Equality of continuous functions on closure and related results	456

2.3.6	A function constant on a set	457
2.3.7	Continuity relative to a union.	457
2.3.8	Inverse function property for open/closed maps	458
2.3.9	Seperability	460
2.3.10	Closed Maps	461
2.3.11	Open Maps	462
2.3.12	Quotient maps	462
2.3.13	Pasting lemmas for functions, for of casewise definitions	464
2.3.14	Retractions	469
2.3.15	Retractions on a topological space	474
2.3.16	Paths and path-connectedness	476
2.3.17	Connected components	479
2.3.18	Combining theorems for continuous functions into the reals	485
2.3.19	A few cardinality results	486
3	Connected Components	493
3.0.1	Connectedness	493
3.0.2	Connected components, considered as a connectedness relation or a set	494
3.0.3	The set of connected components of a set	499
3.0.4	Proving a function is constant on a connected set by proving that a level set is open	502
3.0.5	Preservation of Connectedness	502
3.0.6	Lemmas about components	504
3.0.7	Constancy of a function from a connected set into a finite, disconnected or discrete set	507
3.1	Function Topology	508
3.1.1	The product topology	509
3.1.2	The Alexander subbase theorem	526
3.1.3	Open Pi-sets in the product topology	534
3.1.4	Relationship with connected spaces, paths, etc.	537
3.1.5	Projections from a function topology to a component	542
3.1.6	Limits	543
3.2	The binary product topology	545
3.3	Product Topology	545
3.3.1	Definition	545
3.3.2	Continuity	549
3.3.3	Homeomorphic maps	556
3.4	T1 and Hausdorff spaces	561
3.5	T1 spaces with equivalences to many naturally "nice" properties.	561
3.5.1	Hausdorff Spaces	566
3.6	Lindelöf spaces	578

4	Functional Analysis	585
4.1	A decision procedure for metric spaces	585
5	Elementary Metric Spaces	589
5.1	Open and closed balls	589
5.2	Limit Points	596
5.3	Perfect Metric Spaces	597
5.4	Finite and discrete	597
5.5	Interior	598
5.6	Frontier	598
5.7	Limits	599
5.8	Continuity	601
5.9	Closure and Limit Characterization	603
5.10	Boundedness	605
5.11	Compactness	607
5.12	Banach fixed point theorem	612
5.13	Edelstein fixed point theorem	614
5.14	The diameter of a set	615
5.15	Metric spaces with the Heine-Borel property	619
5.16	Completeness	623
5.17	Cauchy continuity	627
5.18	Finite intersection property	629
5.19	Properties of Balls and Spheres	630
5.20	Distance from a Set	631
5.21	Infimum Distance	631
5.22	Separation between Points and Sets	636
5.23	Uniform Continuity	637
5.24	Continuity on a Compact Domain Implies Uniform Continuity	639
5.25	Theorems relating continuity and uniform continuity to closures	641
5.26	With Abstract Topology (TODO: move and remove dependency?)	646
5.27	Closed Nest	647
5.28	Making a continuous function avoid some value in a neighbour- hood	649
5.29	Consequences for Real Numbers	650
5.30	The infimum of the distance between two sets	652
5.31	Diameter Lemma	656
5.32	Elementary Normed Vector Spaces	658
5.32.1	Orthogonal Transformation of Balls	658
5.32.2	Various Lemmas Combining Imports	658
5.32.3	Support	660
5.32.4	Intervals	661
5.32.5	Limit Points	662
5.32.6	Balls and Spheres in Normed Spaces	664

5.32.7	Various Lemmas on Normed Algebras	667
5.32.8	Filters	668
5.32.9	Trivial Limits	668
5.32.10	Limits	668
5.32.11	Limit Point of Filter	671
5.32.12	Boundedness	671
5.32.13	Relations among convergence and absolute convergence for power series	675
5.32.14	Normed spaces with the Heine-Borel property	675
5.32.15	Intersecting chains of compact sets and the Baire property	676
5.32.16	Continuity	680
5.32.17	Arithmetic Preserves Topological Properties	682
5.32.18	Homeomorphisms	690
5.32.19	Discrete	692
5.32.20	Completeness of "Isometry" (up to constant bounds) . .	692
5.32.21	Connected Normed Spaces	694
5.33	Linear Decision Procedure for Normed Spaces	696
6	Vector Analysis	701
6.1	Elementary Topology in Euclidean Space	701
6.1.1	Continuity of the representation WRT an orthogonal basis	701
6.1.2	Balls in Euclidean Space	703
6.1.3	Boxes	707
6.1.4	General Intervals	721
6.1.5	Bounded Projections	725
6.1.6	Structural rules for pointwise continuity	725
6.1.7	Structural rules for setwise continuity	726
6.1.8	Openness of halfspaces.	726
6.1.9	Closure and Interior of halfspaces and hyperplanes . . .	726
6.1.10	Some more convenient intermediate-value theorem for- mulations	729
6.1.11	Limit Component Bounds	729
6.1.12	Class Instances	735
6.1.13	Compact Boxes	736
6.1.14	Componentwise limits and continuity	738
6.1.15	Continuous Extension	740
6.1.16	Separability	742
6.1.17	Diameter	744
6.1.18	Relating linear images to open/closed/interior/closure/con- nected	745
6.1.19	"Isometry" (up to constant bounds) of Injective Linear Map	747
6.1.20	Some properties of a canonical subspace	750

6.1.21	Set Distance	752
6.2	Line Segment	754
6.2.1	Topological Properties of Convex Sets, Metric Spaces and Functions	754
6.2.2	Midpoint	757
6.2.3	Open and closed segments	759
6.2.4	Betweenness	774
6.3	Convex Sets and Functions on (Normed) Euclidean Spaces . . .	777
6.3.1	Topological Properties of Convex Sets and Functions . . .	778
6.3.2	Relative interior of a set	779
6.3.3	Openness and compactness are preserved by convex hull operation	793
6.3.4	Extremal points of a simplex are some vertices	797
6.3.5	Closest point of a convex set is unique, with a continu- ous projection	801
6.3.6	More convexity generalities	810
6.3.7	Convex set as intersection of halfspaces	810
6.3.8	Convexity of general and special intervals	811
6.3.9	On <i>real</i> , <i>is_interval</i> , <i>convex</i> and <i>connected</i> are all equiv- alent	813
6.3.10	Another intermediate value theorem formulation	814
6.3.11	A bound within an interval	815
6.3.12	Representation of any interval as a finite convex hull . . .	817
6.3.13	Bounded convex function on open set is continuous . . .	818
6.3.14	Upper bound on a ball implies upper and lower bounds . .	820
7	Unsorted	825
7.0.1	Shrinking towards the interior of a convex set	826
7.0.2	Some obvious but surprisingly hard simplex lemmas . . .	831
7.0.3	Relative interior of convex set	839
7.0.4	The relative frontier of a set	848
7.0.5	Convexity on direct sums	878
7.0.6	Explicit formulas for interior and relative interior of con- vex hull	885
7.0.7	Similar results for closure and (relative or absolute) frontier	892
7.0.8	Coplanarity, and collinearity in terms of affine hull . . .	896
7.0.9	Basic lemmas about hyperplanes and halfspaces	906
7.0.10	Use set distance for an easy proof of separation properties .	907
7.0.11	Connectedness of the intersection of a chain	909
7.0.12	Proper maps, including projections out of compact sets . .	912
7.0.13	Closure of conic hulls	913

7.0.14	Trivial fact: convexity equals connectedness for collinear sets	916
7.0.15	Some stepping theorems	926
7.0.16	General case without assuming closure and getting non-strict separation	929
7.0.17	Some results on decomposing convex hulls: intersections, simplicial subdivision	933
7.0.18	Lower-dimensional affine subsets are nowhere dense . .	945
7.0.19	Parallel slices, etc	947
7.0.20	Paracompactness	951
7.0.21	Closed-graph characterization of continuity	954
7.0.22	The union of two collinear segments is another segment	956
7.0.23	Covering an open set by a countable chain of compact sets	960
7.0.24	Orthogonal complement	962
7.0.25	A non-injective linear function maps into a hyperplane.	964
7.1	Path-Connectedness	966
7.1.1	Paths and Arcs	966
7.1.2	Invariance theorems	967
7.1.3	Basic lemmas about paths	969
7.1.4	Path Images	973
7.1.5	Simple paths with the endpoints removed	975
7.1.6	The operations on paths	976
7.1.7	Some reversed and "if and only if" versions of joining theorems	978
7.1.8	The joining of paths is associative	981
7.1.9	Subpath	983
7.1.10	There is a subpath to the frontier	986
7.1.11	Shift Path to Start at Some Given Point	988
7.1.12	Straight-Line Paths	991
7.1.13	Segments via convex hulls	995
7.1.14	Bounding a point away from a path	998
7.1.15	Path component	998
7.1.16	Path connectedness of a space	1000
7.1.17	Lemmas about path-connectedness	1005
7.1.18	Path components	1008
7.1.19	Path components	1009
7.1.20	Paths and path-connectedness	1018
7.1.21	Path components	1019
7.1.22	Sphere is path-connected	1022
7.1.23	Every annulus is a connected set	1029
7.1.24	Relations between components and path components .	1030
7.1.25	Existence of unbounded components	1032
7.1.26	The <i>inside</i> and <i>outside</i> of a Set	1034

7.1.27	Condition for an open map's image to contain a ball	1050
7.1.28	Rectangular paths	1056
7.2	Neighbourhood bases and Locally path-connected spaces	1057
7.2.1	Neighbourhood Bases	1057
7.2.2	Locally path-connected spaces	1059
7.2.3	Locally connected spaces	1069
7.2.4	Dimension of a topological space	1079
7.3	Some Uncountable Sets	1083
7.4	Homotopy of Maps	1086
7.4.1	Trivial properties	1087
7.4.2	Homotopy with P is an equivalence relation	1089
7.4.3	Continuity lemmas	1091
7.4.4	Homotopy of paths, maintaining the same endpoints	1096
7.4.5	Group properties for homotopy of paths	1100
7.4.6	Homotopy of loops without requiring preservation of endpoints	1101
7.4.7	Relations between the two variants of homotopy	1103
7.4.8	Homotopy of "nearby" function, paths and loops	1107
7.4.9	Homotopy and subpaths	1109
7.4.10	Simply connected sets	1112
7.4.11	Contractible sets	1115
7.4.12	Starlike sets	1117

8 Measure and Integration Theory 2063

8.1	Sigma Algebra	2063
8.1.1	Families of sets	2063
8.1.2	Measure type	2092
8.1.3	The smallest σ -algebra regarding a function	2105
8.2	Measurability Prover	2111
8.2.1	Measurability for (co)inductive predicates	2119
8.3	Measure Spaces	2125
8.3.1	Relate extended reals and the indicator function	2125
8.3.2	Extend binary sets	2126
8.3.3	Properties of a premeasure μ	2127
8.3.4	Properties of <i>emeasure</i>	2134
8.3.5	μ -null sets	2144
8.3.6	The almost everywhere filter (i.e. quantifier)	2147
8.3.7	σ -finite Measures	2153
8.3.8	Measure space induced by distribution of (\rightarrow_M) -functions	2155

8.3.9	Real measure values	2158
8.3.10	Set of measurable sets with finite measure	2162
8.3.11	Measurable sets formed by unions and intersections	2163
8.3.12	Measure spaces with <i>emeasure</i> M (<i>space</i> M) $< \infty$	2170
8.3.13	Counting space	2175
8.3.14	Measure restricted to space	2178
8.3.15	Null measure	2182
8.3.16	Scaling a measure	2182
8.3.17	Complete lattice structure on measures	2183
8.4	Borel Space	2207
8.4.1	Generic Borel spaces	2211
8.4.2	Borel spaces on order topologies	2219
8.4.3	Borel spaces on topological monoids	2225
8.4.4	Borel spaces on Euclidean spaces	2226
8.4.5	Borel measurable operators	2233
8.4.6	Borel space on the extended reals	2238
8.4.7	Borel space on the extended non-negative reals	2241
8.4.8	LIMSEQ is borel measurable	2243
8.5	Lebesgue Integration for Nonnegative Functions	2252
8.5.1	Approximating functions	2252
8.5.2	Simple function	2254
8.5.3	Simple integral	2264
8.5.4	Integral on nonnegative functions	2270
8.5.5	Integral under concrete measures	2291
8.6	Binary Product Measure	2311
8.6.1	Binary products	2311
8.6.2	Binary products of σ -finite <i>emeasure</i> spaces	2319
8.6.3	Fubini's theorem	2324
8.6.4	Products on counting spaces, densities and distributions	2325
8.6.5	Product of Borel spaces	2337
8.7	Finite Product Measure	2338
8.7.1	More about Function restricted by <i>extensional</i>	2338
8.7.2	Finite product spaces	2340
8.7.3	Measurability	2366
8.8	Caratheodory Extension Theorem	2369
8.8.1	Characterizations of Measures	2370
8.8.2	Caratheodory's theorem	2379
8.8.3	Volumes	2380
8.9	Bochner Integration for Vector-Valued Functions	2388
8.9.1	Restricted measure spaces	2437
8.9.2	Measure spaces with an associated density	2438
8.9.3	Distributions	2440
8.9.4	Lebesgue integration on <i>count_space</i>	2442
8.9.5	Point measure	2443

8.9.6	Lebesgue integration on <i>null_measure</i>	2444
8.9.7	Legacy lemmas for the real-valued Lebesgue integral . .	2444
8.9.8	Product measure	2451
8.10	Complete Measures	2462
8.11	Regularity of Measures	2489
8.12	Lebesgue Measure	2498
8.12.1	Measures defined by monotonous functions	2498
8.12.2	Lebesgue-Borel measure	2505
8.12.3	Borel measurability	2508
8.12.4	Measurability of continuous functions	2511
8.12.5	Affine transformation on the Lebesgue-Borel	2517
8.12.6	Lebesgue measurable sets	2525
8.12.7	Translation preserves Lebesgue measure	2526
8.12.8	A nice lemma for negligibility proofs	2528
8.12.9	F_sigma and G_delta sets.	2533
8.13	Tagged Divisions for Henstock-Kurzweil Integration	2536
8.13.1	Some useful lemmas about intervals	2536
8.13.2	Bounds on intervals where they exist	2537
8.13.3	The notion of a gauge — simply an open set containing the point	2539
8.13.4	Attempt a systematic general set of "offset" results for components	2540
8.13.5	Divisions	2540
8.13.6	Tagged (partial) divisions	2553
8.13.7	Functions closed on boxes: morphisms from boxes to monoids	2559
8.13.8	Special case of additivity we need for the FTC	2569
8.13.9	Fine-ness of a partition w.r.t. a gauge	2570
8.13.10	Some basic combining lemmas	2570
8.13.11	The set we're concerned with must be closed	2571
8.13.12	General bisection principle for intervals; might be useful elsewhere	2571
8.13.13	Cousin's lemma	2576
8.13.14	A technical lemma about "refinement" of division . . .	2577
8.13.15	Division filter	2585
8.14	Henstock-Kurzweil Gauge Integration in Many Dimensions . .	2586
8.14.1	Content (length, area, volume, etc.) of an interval . . .	2586
8.14.2	Gauge integral	2592
8.14.3	Basic theorems about integrals	2593
8.14.4	Cauchy-type criterion for integrability	2608
8.14.5	Additivity of integral on abutting intervals	2610
8.14.6	A sort of converse, integrability on subintervals	2615
8.14.7	Bounds on the norm of Riemann sums and the integral itself	2620

8.14.8	Similar theorems about relationship among components	2621
8.14.9	Uniform limit of integrable functions is integrable . . .	2625
8.14.10	Negligible sets	2628
8.14.11	Some other trivialities about negligible sets	2636
8.14.12	Finite case of the spike theorem is quite commonly needed	2638
8.14.13	In particular, the boundary of an interval is negligible .	2639
8.14.14	Integrability of continuous functions	2640
8.14.15	Specialization of additivity to one dimension	2642
8.14.16	A useful lemma allowing us to factor out the content size	2642
8.14.17	Fundamental theorem of calculus	2643
8.14.18	Taylor series expansion	2648
8.14.19	Only need trivial subintervals if the interval itself is trivial	2650
8.14.20	Integrability on subintervals	2652
8.14.21	Combining adjacent intervals in 1 dimension	2653
8.14.22	Reduce integrability to "local" integrability	2654
8.14.23	Second FTC or existence of antiderivative	2655
8.14.24	Combined fundamental theorem of calculus	2657
8.14.25	General "twiddling" for interval-to-interval function image	2657
8.14.26	Special case of a basic affine transformation	2659
8.14.27	Special case of stretching coordinate axes separately . .	2664
8.14.28	even more special cases	2669
8.14.29	Stronger form of FCT; quite a tedious proof	2670
8.14.30	Stronger form with finite number of exceptional points	2678
8.14.31	This doesn't directly involve integration, but that gives an easy proof	2684
8.14.32	Generalize a bit to any convex set	2685
8.14.33	Integrating characteristic function of an interval	2688
8.14.34	Integrals on set differences	2694
8.14.35	More lemmas that are useful later	2697
8.14.36	Continuity of the integral (for a 1-dimensional interval)	2699
8.14.37	A straddling criterion for integrability	2703
8.14.38	Adding integrals over several sets	2707
8.14.39	Also tagged divisions	2710
8.14.40	Henstock's lemma	2711
8.14.41	Monotone convergence (bounded interval first)	2716
8.14.42	differentiation under the integral sign	2730
8.14.43	Exchange uniform limit and integral	2734
8.14.44	Integration by parts	2736
8.14.45	Integration by substitution	2737
8.14.46	Compute a double integral using iterated integrals and switching the order of integration	2739
8.14.47	Definite integrals for exponential and power function .	2747
8.14.48	Adaption to ordered Euclidean spaces and the Cartesian Euclidean space	2752

by (metis dist_0_norm dist_norm isometry_linear linear_0 linear_diff)

Can extend an isometry from unit sphere:

lemma *isometry_sphere_extend*:

fixes $f::'a::\text{real_inner} \Rightarrow 'a$
 assumes $f1: \bigwedge x. \text{norm } x = 1 \implies \text{norm } (f x) = 1$
 and $fd1: \bigwedge x y. \llbracket \text{norm } x = 1; \text{norm } y = 1 \rrbracket \implies \text{dist } (f x) (f y) = \text{dist } x y$
 shows $\exists g. \text{orthogonal_transformation } g \wedge (\forall x. \text{norm } x = 1 \longrightarrow g x = f x)$

proof -

```

{
  fix x y x' y' u v u' v' :: 'a
  assume H: x = norm x *R u y = norm y *R v
           x' = norm x *R u' y' = norm y *R v'
  and J: norm u = 1 norm u' = 1 norm v = 1 norm v' = 1 norm(u' - v') =
norm(u - v)
  then have *: u · v = u' · v' + v' · u' - v · u

1.13.10 Continuous maps

We will need to deal with continuous maps in terms of topologies and not in terms of type classes, as defined below.

definition *continuous_map* **where**
 $\text{continuous_map } X \ Y \ f \equiv$
 $f \in \text{topspace } X \rightarrow \text{topspace } Y \wedge$

$$(\forall U. \text{openin } Y \ U \longrightarrow \text{openin } X \ \{x \in \text{topspace } X. f \ x \in U\})$$

lemma *continuous_map*:

continuous_map $X \ Y \ f \longleftrightarrow$
 $f \text{ ' } (\text{topspace } X) \subseteq \text{topspace } Y \wedge (\forall U. \text{openin } Y \ U \longrightarrow \text{openin } X \ \{x \in \text{topspace } X. f \ x \in U\})$
by (*auto simp: continuous_map_def*)

lemma *continuous_map_image_subset_topspace*:

continuous_map $X \ Y \ f \implies f \text{ ' } (\text{topspace } X) \subseteq \text{topspace } Y$
by (*auto simp: continuous_map_def*)

lemma *continuous_map_funspace*:

continuous_map $X \ Y \ f \implies f \in \text{topspace } X \rightarrow \text{topspace } Y$
by (*auto simp: continuous_map_def*)

lemma *continuous_map_on_empty* [*simp*]: *continuous_map* *trivial_topology* $Y \ f$

by (*auto simp: continuous_map_def*)

lemma *continuous_map_on_empty2* [*simp*]: *continuous_map* $X \ \text{trivial_topology}$

$f \longleftrightarrow X = \text{trivial_topology}$

using *continuous_map_image_subset_topspace* **by** *fastforce*

lemma *continuous_map_closedin*:

continuous_map $X \ Y \ f \longleftrightarrow$
 $f \in \text{topspace } X \rightarrow \text{topspace } Y \wedge$
 $(\forall C. \text{closedin } Y \ C \longrightarrow \text{closedin } X \ \{x \in \text{topspace } X. f \ x \in C\})$

proof –

have $(\forall U. \text{openin } Y \ U \longrightarrow \text{openin } X \ \{x \in \text{topspace } X. f \ x \in U\}) =$

$(\forall C. \text{closedin } Y \ C \longrightarrow \text{closedin } X \ \{x \in \text{topspace } X. f \ x \in C\})$

if $f \in \text{topspace } X \rightarrow \text{topspace } Y$

proof –

have $\text{eq: } \{x \in \text{topspace } X. f \ x \in \text{topspace } Y \wedge f \ x \notin C\} = (\text{topspace } X - \{x \in \text{topspace } X. f \ x \in C\})$ **for** C

using *that* **by** *blast*

show *?thesis*

proof (*intro iffI allI impI*)

fix C

1.13.22 The topology generated by some (open) subsets

In the definition below of a generated topology, the *Empty* case is not necessary, as it follows from *UN* taking for *K* the empty set. However, it is convenient to have, and is never a problem in proofs, so I prefer to write it down explicitly.

We do not require *UNIV* to be an open set, as this will not be the case in applications. (We are thinking of a topology on a subset of *UNIV*, the remaining part of *UNIV* being irrelevant.)

```

inductive generate_topology_on for S where
  Empty: generate_topology_on S {}
| Int: generate_topology_on S a  $\implies$  generate_topology_on S b  $\implies$  generate_topology_on S (a ∩ b)
| UN: ( $\bigwedge k. k \in K \implies$  generate_topology_on S k)  $\implies$  generate_topology_on S ( $\bigcup K$ )
| Basis: s ∈ S  $\implies$  generate_topology_on S s

```

1.13.25 Pullback topology

Pulling back a topology by map gives again a topology. *subtopology* is a special case of this notion, pulling back by the identity. We introduce the general notion as we will need it to define the strong operator topology on the space of continuous linear operators, by pulling back the product topology on the space of all functions.

pullback_topology $A\ f\ T$ is the pullback of the topology T by the map f on the set A .

definition *pullback_topology*::('a set) \Rightarrow ('a \Rightarrow 'b) \Rightarrow ('b topology) \Rightarrow ('a topology)
where *pullback_topology* $A\ f\ T = \text{topology } (\lambda S. \exists U. \text{openin } T\ U \wedge S = f - ' U \cap A)$

```

2.2.1 Abstract

The following document presents a proof that the Continuum is uncountable. It is formalised in the Isabelle/Isar theorem proving system.

Theorem: The Continuum \mathbb{R} is not denumerable. In other words, there does not exist a function $f: \mathbb{N} \Rightarrow \mathbb{R}$ such that f is surjective.

Outline: An elegant informal proof of this result uses Cantor's Diagonalisation argument. The proof presented here is not this one.

First we formalise some properties of closed intervals, then we prove the Nested Interval Property. This property relies on the completeness of the Real numbers and is the foundation for our argument. Informally it states that an intersection of countable closed intervals (where each successive interval is a subset of the last) is non-empty. We then assume a surjective function $f: \mathbb{N} \Rightarrow \mathbb{R}$ exists and find a real x such that x is not in the range of f by generating a sequence of closed intervals then using the Nested Interval Property.

```

theorem real_non_denum:  $\nexists f :: \text{nat} \Rightarrow \text{real. surj } f$ 
proof
  assume  $\exists f :: \text{nat} \Rightarrow \text{real. surj } f$ 

```

then obtain $f :: \text{nat} \Rightarrow \text{real}$ **where** $\text{surj } f \dots$

First we construct a sequence of nested intervals, ignoring $\text{range } f$.

have $a < b \implies \exists ka kb. ka < kb \wedge \{ka..kb\} \subseteq \{a..b\} \wedge c \notin \{ka..kb\}$ **for** $a b c :: \text{real}$

by ($\text{auto simp add: not_le cong: conj_cong}$)
 ($\text{metis dense le_less_linear less_linear less_trans order_refl}$)

then obtain $i j$ **where** ij :

$a < b \implies i a b c < j a b c$
 $a < b \implies \{i a b c .. j a b c\} \subseteq \{a .. b\}$
 $a < b \implies c \notin \{i a b c .. j a b c\}$

for $a b c :: \text{real}$

by metis

define ivl **where** $ivl =$

$\text{rec_nat } (f\ 0 + 1, f\ 0 + 2) (\lambda n x. (i\ (fst\ x)\ (snd\ x)\ (f\ n), j\ (fst\ x)\ (snd\ x)\ (f\ n)))$

define I **where** $I\ n = \{fst\ (ivl\ n) .. snd\ (ivl\ n)\}$ **for** n

have $ivl\ [simp]$:

$ivl\ 0 = (f\ 0 + 1, f\ 0 + 2)$

$\bigwedge n. ivl\ (Suc\ n) = (i\ (fst\ (ivl\ n))\ (snd\ (ivl\ n))\ (f\ n), j\ (fst\ (ivl\ n))\ (snd\ (ivl\ n))\ (f\ n))$

unfolding ivl_def **by** simp_all

This is a decreasing sequence of non-empty intervals.

have $\text{less: } fst\ (ivl\ n) < snd\ (ivl\ n)$ **for** n

by ($\text{induct } n$) ($\text{auto intro!: } ij$)

have $\text{decseq } I$

unfolding I_def $\text{decseq_Suc_iff } ivl\ fst_conv\ snd_conv$

by ($\text{intro } ij\ allI\ less$)

Now we apply the finite intersection property of compact sets.

have $I\ 0 \cap (\bigcap i. I\ i) \neq \{\}$

proof ($\text{rule compact_imp_fip_image}$)

fix $S :: \text{nat set}$

assume $\text{fin: finite } S$

have $\{\} \subset I\ (Max\ (insert\ 0\ S))$

unfolding I_def **using** $\text{less[of } Max\ (insert\ 0\ S)]$ **by** auto

also have $I\ (Max\ (insert\ 0\ S)) \subseteq (\bigcap i \in insert\ 0\ S. I\ i)$

using $\text{fin decseqD[OF } \langle \text{decseq } I \rangle, of_Max\ (insert\ 0\ S)]$

by ($\text{auto simp: Max_ge_iff}$)

also have $(\bigcap i \in insert\ 0\ S. I\ i) = I\ 0 \cap (\bigcap i \in S. I\ i)$

by auto

finally show $I\ 0 \cap (\bigcap i \in S. I\ i) \neq \{\}$

by auto

qed ($\text{auto simp: } I_def$)

then obtain x **where** $x \in I\ n$ **for** n

```

    by blast
  moreover from ⟨surj f⟩ obtain j where x = f j
    by blast
  ultimately have f j ∈ I (Suc j)
    by blast
  with ij(3)[OF less] show False

3.1 Function Topology

We want to define the general product topology.

The product topology on a product of topological spaces is generated by the sets which are products of open sets along finitely many coordinates, and the whole space along the other coordinates. This is the coarsest topology for which the projection to each factor is continuous.

To form a product of objects in Isabelle/HOL, all these objects should be subsets of a common type 'a. The product is then $\prod_{i \in I} X_i$, the set of elements from 'i to 'a such that the i -th coordinate belongs to X_i for all $i \in I$.

Hence, to form a product of topological spaces, all these spaces should be subsets of a common type. This means that type classes can not be used to define such a product if one wants to take the product of different topological spaces (as the type 'a can only be given one structure of topological space using type classes). On the other hand, one can define different topologies (as introduced in *thy*) on one type, and these topologies do not need to share the same maximal open set. Hence, one can form a product of topologies in this sense, and this works well. The big caveat is that it does not interact

well with the main body of topology in Isabelle/HOL defined in terms of type classes... For instance, continuity of maps is not defined in this setting. As the product of different topological spaces is very important in several areas of mathematics (for instance adeles), I introduce below the product topology in terms of topologies, and reformulate afterwards the consequences in terms of type classes (which are of course very handy for applications).

Given this limitation, it looks to me that it would be very beneficial to revamp the theory of topological spaces in Isabelle/HOL in terms of topologies, and keep the statements involving type classes as consequences of more general statements in terms of topologies (but I am probably too naive here).

Here is an example of a reformulation using topologies. Let

$$\begin{aligned} \text{continuous_map } T1 \ T2 \ f = \\ ((\forall \ U. \text{openin } T2 \ U \longrightarrow \text{openin } T1 \ (f^{-1} U \cap \text{topspace}(T1))) \\ \wedge (f^{-1}(\text{topspace } T1) \subseteq (\text{topspace } T2))) \end{aligned}$$

be the natural continuity definition of a map from the topology $T1$ to the topology $T2$. Then the current *continuous_on* (with type classes) can be redefined as

$$\begin{aligned} \text{continuous_on } s \ f = \\ \text{continuous_map } (\text{top_of_set } s) \ (\text{topology euclidean}) \ f \end{aligned}$$

In fact, I need *continuous_map* to express the continuity of the projection on subfactors for the product topology, in Lemma *continuous_on_restrict_product_topology*, and I show the above equivalence in Lemma *continuous_map_iff_continuous*.

I only develop the basics of the product topology in this theory. The most important missing piece is Tychonov theorem, stating that a product of compact spaces is always compact for the product topology, even when the product is not finite (or even countable).

I realized afterwards that this theory has a lot in common with `~~/src/HOL/Library/Finite_Map.thy`.

3.1.1 The product topology

We can now define the product topology, as generated by the sets which are products of open sets along finitely many coordinates, and the whole space along the other coordinates. Equivalently, it is generated by sets which are one open set along one single coordinate, and the whole space along other coordinates. In fact, this is only equivalent for nonempty products, but for the empty product the first formulation is better (the second one gives an empty product space, while an empty product should have exactly one point, equal to *undefined* along all coordinates).

So, we use the first formulation, which moreover seems to give rise to more straightforward proofs.

definition *product_topology* :: ('i \Rightarrow ('a topology)) \Rightarrow ('i set) \Rightarrow (('i \Rightarrow 'a) topology)
where *product_topology* *T I* =
topology_generated_by {(Π_E *i* \in *I*. *X i*) | *X*. (\forall *i*. *openin* (*T i*) (*X i*) \wedge *finite* {*i*.
X i \neq *topspace* (*T i*)}}

abbreviation *powertop_real* :: 'a set \Rightarrow ('a \Rightarrow real) topology
where *powertop_real* \equiv *product_topology* (λ *i*. *euclideanreal*)

The total set of the product topology is the product of the total sets along each coordinate.
