intelligent sensing

In the Machine Listening Lab we develop methods for making sense of natural sounds, everyday sounds, and recorded music. **Machine listening** is the use of signal processing and machine learning to extract useful information from sound.

Lead academics:

Machine listening: birdsong

- ▶ Which species?
- ▶ How many birds?
- ▶ Singing in response to neighbours?
- ▶ Warning about predators?
- ▶ Defending a territory, or newly arrived?

Machine listening: Music information retrieval

- ▶ Which instruments?
- ▶ Which notes? When?
- ▶ How performed? e.g. vibrato, legato, soft/hard
- ▶ Unexpected sounds? (e.g. artefact removal)
- ▶ Song structure, repetition?

Outline

1. Audio feature extraction
2. Onsets and pitches
3. Machine learning (outline only!),
classification and clustering
4. Python demo
5. Non-real-time vs. realtime
6. Automatic music transcription
