

Linking C and C++ code

- ▶ What if I want to write a library in C, and specify it via `mylib.h` which is importable into both C and C++?
- ▶ Use conditional compilation (`#ifdef`) in `mylib.h`, e.g.

```
1 #ifdef __cplusplus
2     extern "C" void myfn(int, bool);
3 #else
4 # include <stdbool.h> // Ensure type bool defined in C
5     extern void myfn(int, bool);
6 #endif
```
