

Distributed Systems

Part 2, Part 2 (General) and Diploma, Easter term 2003

Jean Bacon and Peter Pietzuch (jmb, prp22@cl.cam.ac.uk)

	pages
Introduction	
fundamental characteristics	I
structure	
evolution	
models, architecture, engineering	
Time	T
event ordering	
physical clock synchronisation	
process groups	
ordering message delivery	
Distributed algorithms and protocols	D
strong and weak consistency	
replicas of an object, transactions on distributed objects	
concurrency control	
atomic commitment	
election algorithms	
distributed mutual exclusion	
Communications in middleware: see Peter Pietzuch's notes	
Communication support (supplementary material)	C
Introduction	
Cambridge Event Architecture (1990s)	
RPC (for Part 2G and Diploma)	
Naming	N
Access Control	A
capabilities, ACLs and access control policy	
OASIS case study	
Storage services	S
distribution issues, outline of Cambridge File Server
