L98: Introduction to Computational Semantics
Pre-Lecture 7 Exercise: Adjective Ordering

Simone Teufel and Weiwei Sun

Lent 2021/22

- Imagine you want to assert many properties of an object (and use adjectives).
- The object is boxes, and the properties are (in alphabetical order):
  - American
  - brand-new
  - cheap-looking
  - heart-shaped
  - striped
  - tiny
  - yellow
  - 17 of them

- How do you order these descriptors?
- How about an algorithm for any subset of these?
- (and how does this work in your own language)?
