Advanced Operating Systems: Readings

Prof. Robert N. M. Watson

2022-2023

Reading assignments

Reading assignments should be completed prior to the lecture or lab that they correspond to. Full citations for books and papers may be found below.

Lab 1: Gregg and Mauro: Chapters 1 (Introduction to DTrace) and 2 (D Language).

  Paper - Navarro, et al. 2002. (L41 only)

Lab 3: No reading assignment.

  Paper - Marinos, et al. 2014. (L41 only)

Lab 4: Paper - Rizzo 1997. (L41 only)
  Paper - Bishop, et al. 2005. (L41 only)

Course texts

Course texts provide instruction on statistics, operating-system design and implementation, and system tracing. You will be asked to read selected chapters from these, but will likely find other content in them useful as you proceed with the labs.

Research readings

Our research readings are drawn from various systems publications venues; these provide insight into types of research done with systems that are particularly relevant to our laboratory work, but also examples of practical systems research. Some readings are assigned prior to specific lectures or labs; others are for your (optional) enlightenment (and hopefully also enjoyment). Only selected readings are assigned for Part II students; please check the schedule above to confirm which you should read.

Tracing and performance analysis

Kernel structure and primitives

Paul Barham, Boris Dragovic, Keir Fraser, Steven Hand, Tim Harris, Alex Ho, Rolf Neugebauer, Ian Pratt, and Andrew Warfield. Xen and the Art of Virtualization. Proceedings of the 19th ACM Symposium on Operating Systems Principles (SOSP’03), ACM, October 2003. (Optional reading)

Network stacks

Supplemental course texts

The supplemental readings may be useful in refreshing or building up your basic knowledge and skills in support of our lectures and labs.
