1 Programming in C (NK)

(a) The following function is specified to return the quotient of two integers, returning zero when the answer is undefined.

```c
#include <stdint.h>
#include <limits.h>

int64_t divide(int64_t x, int64_t y) {
    return x / y;
}
```

(i) Identify two bugs in this program.

(ii) Write a correct version of this program.

[6 marks]

(b) The `strlen` function takes a valid C string as an argument, and returns the length of the string up to and not including the first null character. An (erroneous) implementation is given below:

```c
#include <stddef.h>

size_t strlen(const char *s) {
    size_t i;
    while (s[i] >= 0)
        i++;
    return i;
}
```

(i) Find two errors in this program.

(ii) Give a correct implementation of this function.

[6 marks]

(c) Write a function with the prototype

```c
void rotate(int len, int *array, int k)
```

which rotates its input k elements to the right. E.g., if the input `array` is the array [0, 1, 2, 3, 4, 5], then the call `rotate(6, array, 2)` should result in `array` being modified to [4, 5, 0, 1, 2, 3]. Assume the array length is passed in the `len` argument and 0 ≤ k < len.
