

9 Semantics of Programming Languages (nk480)

- (a) Suppose that  $l : \text{intref} \in \Gamma$ . Now, consider the following program equivalence for L1:

$$(\text{if } !l \leq 0 \text{ then } e_1 \text{ else } e_2); e_3 \simeq_{\text{unit}}^{\Gamma} (\text{if } !l \leq 0 \text{ then } e_1; e_3 \text{ else } e_2; e_3)$$

- (i) Explain informally but carefully why this equivalence holds. [3 marks]
- (ii) Using the definition of semantic equivalence, prove that this equivalence holds. [7 marks]
- (b) Now, consider the following *non*-equivalence:

$$e_3; (\text{if } !l \leq 0 \text{ then } e_1 \text{ else } e_2) \not\simeq_{\text{unit}}^{\Gamma} (\text{if } !l \leq 0 \text{ then } e_3; e_1 \text{ else } e_3; e_2)$$

- (i) Give a well-typed example exhibiting a counterexample of this equivalence. [5 marks]
- (ii) Give a statically decidable condition under which the transformation is valid. [5 marks]
