Collaborative Diagnosis: Bridging Clinicians and AI for Respiratory Health Monitoring

Marco Montagna¹ & Jing Han²

¹ Vita-Salute San Raffaele University - San Raffaele Hospital (Milan)

² University of Cambridge

European Research Council
Established by the European Commission

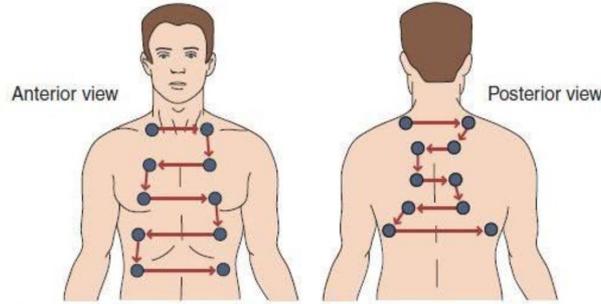

This talk will cover

Part 1: A Real-World Case Study

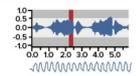

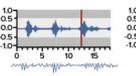

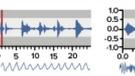

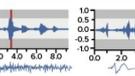

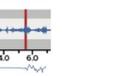

- 🔍 Key findings from our paper “Evaluating Listening Performance for COVID-19 Detection by Clinicians and Machine Learning: Comparative Study”, J Med Internet Res 2023;25:e44804

Part 2: Our Vision of the Future of AI-Clinician Collaboration

- 🚀 Exciting opportunities & critical challenges

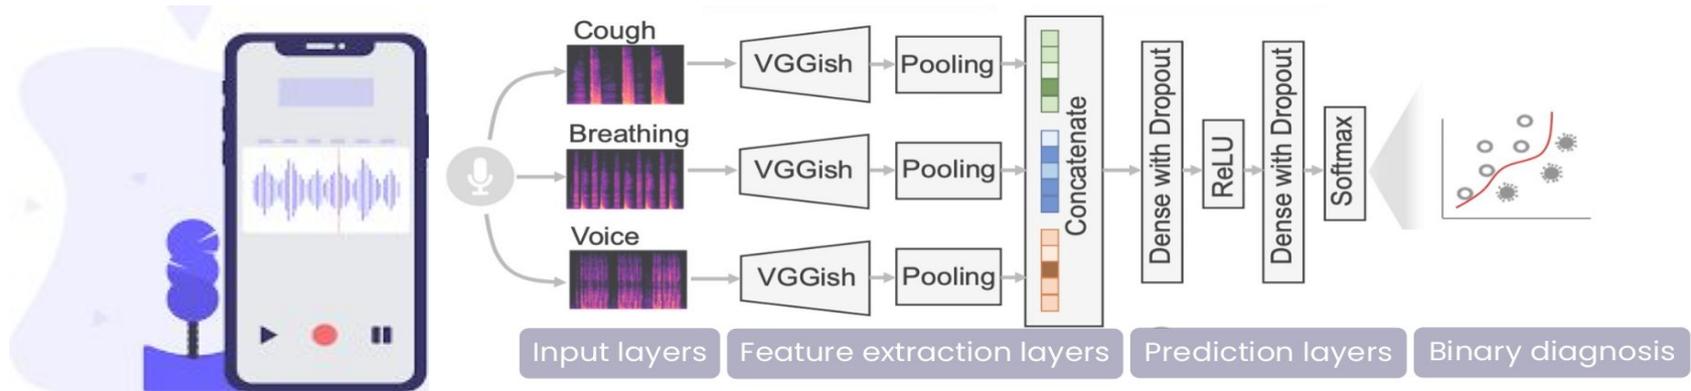

ABNORMAL LUNG SOUNDS

Lung sound	Wheeze	Crackles (rales)	Rhonchi	Stridor	Pleural friction rub
Sounds like	<ul style="list-style-type: none"> High-pitched whistling sound Commonly heard with expiration May be heard 	<ul style="list-style-type: none"> Bubbling, popping, or clicking noises Best heard during inhalation 	<ul style="list-style-type: none"> Low-pitched rattling sounds that may sound like snoring, gurgling, or 	<ul style="list-style-type: none"> High-pitched variable respiratory sound 	<ul style="list-style-type: none"> Creaking, grating, rubbing

we want to explore the synergy between the two

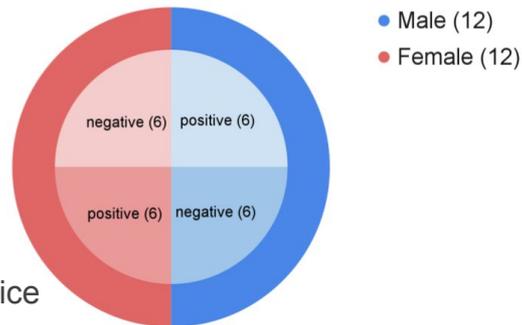

A Real-World Case Study

24 audio clips selected

- covering
 - COVID-19 Positive/Negative
 - (a)symptomatic
 - w/ or w/o asthma
 - non- or heavy smoking
- each audio format:
 - breathing + 1s silence + cough + 1s silence + voice
- total duration **17** min

Virtual:

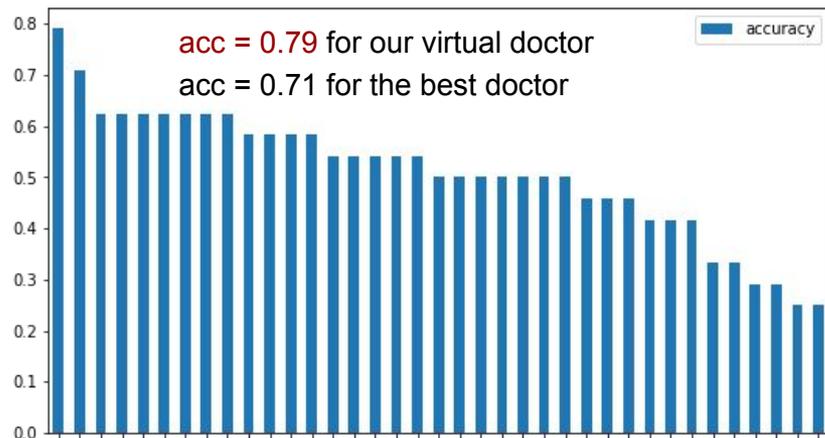

- Machine learning model [Han, J. (2022)]
 - Train and test sets (1162:329)
 - SE = 0.65, SP = 0.69
- Outputs
 - binary decision
 - confidence score

Real:

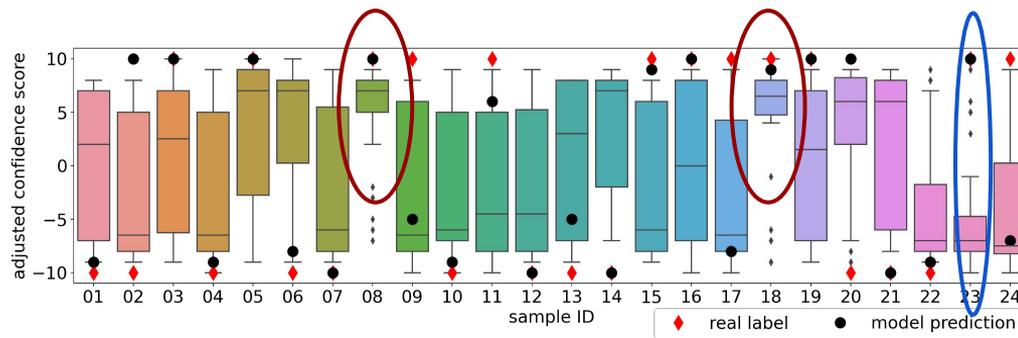

- 36 respiratory clinicians
 - w/ varied experiences
 - listen clips and Answer questions in spreadsheet
- Outputs
 - binary decision
 - confidence score [1-10]

A Real-World Case Study

Performance per single doctor

Decision confidence per audio clip

A Real-World Case Study

Committee of Multiple Members

# Members (Decision weighted)	Acc_max (1000 runs)
4	0.792
5	0.792
10	0.583

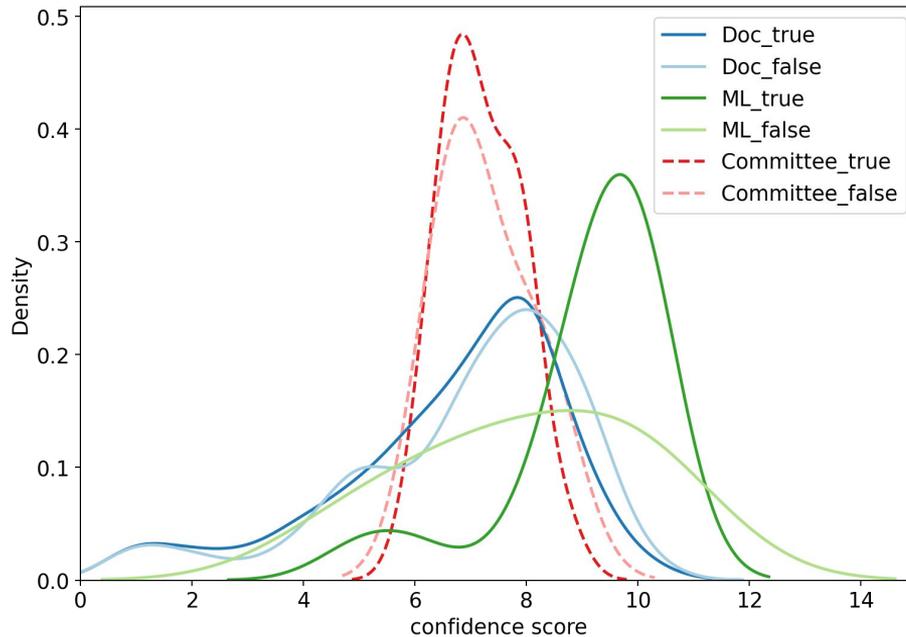

Committee *with a Virtual Member*

# Members (Decision weighted)	Acc_max (1000 runs)
4 +1	0.830
5 +1	0.875
10 +1	0.792

ML model help the clinicians committee reach a more accurate decision.

A Real-World Case Study

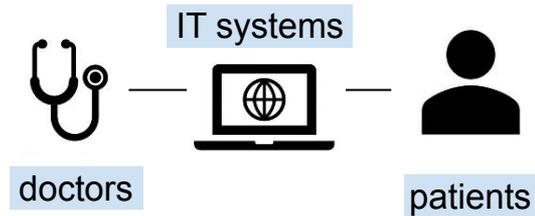

Confidence Score Kernel Density Estimate

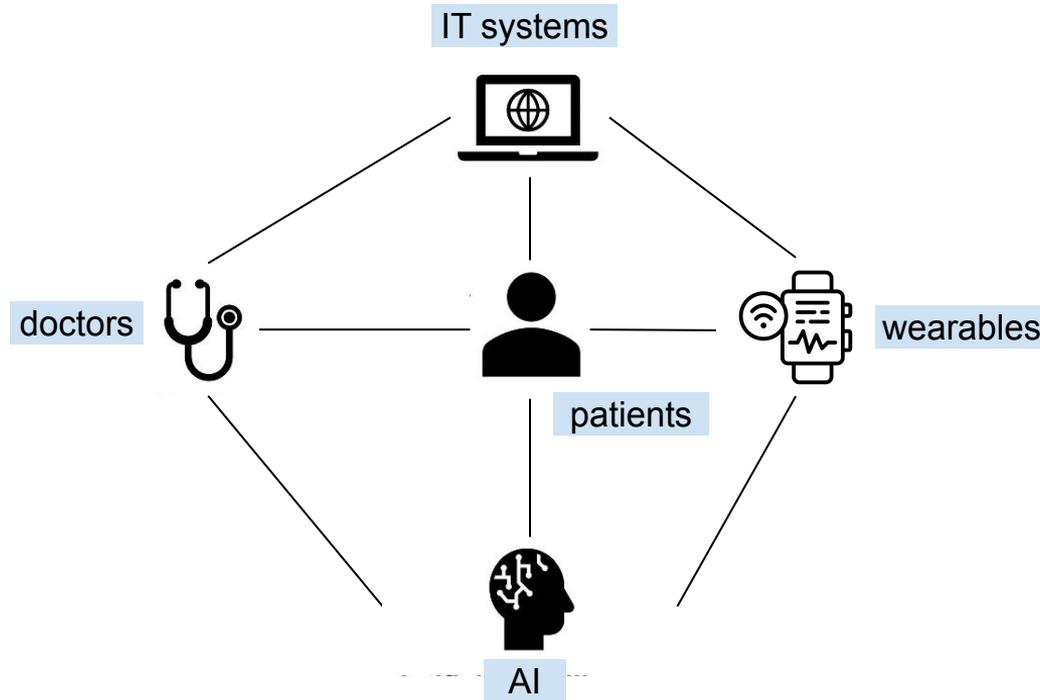

Clinicians help alleviate the overconfidence issue of the ML model.

Part 2: Our Vision of the Future of AI-Clinician Collaboration

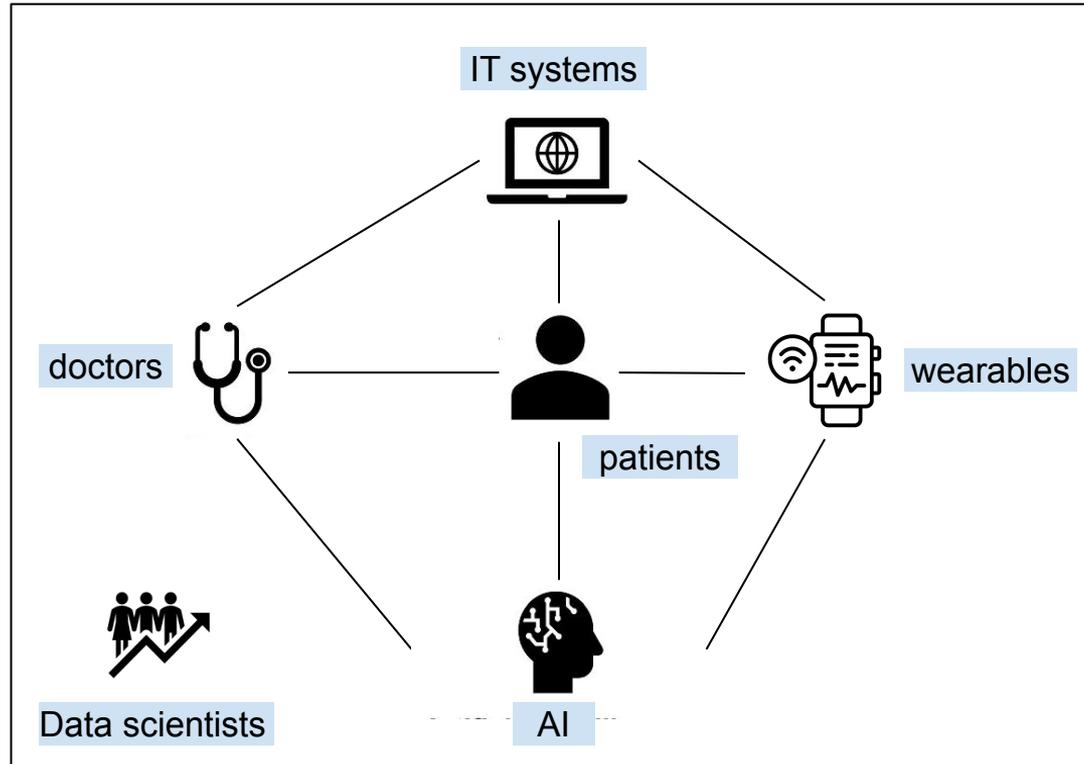

IT systems appeared as intruders

Patients' ecosystem now is complex

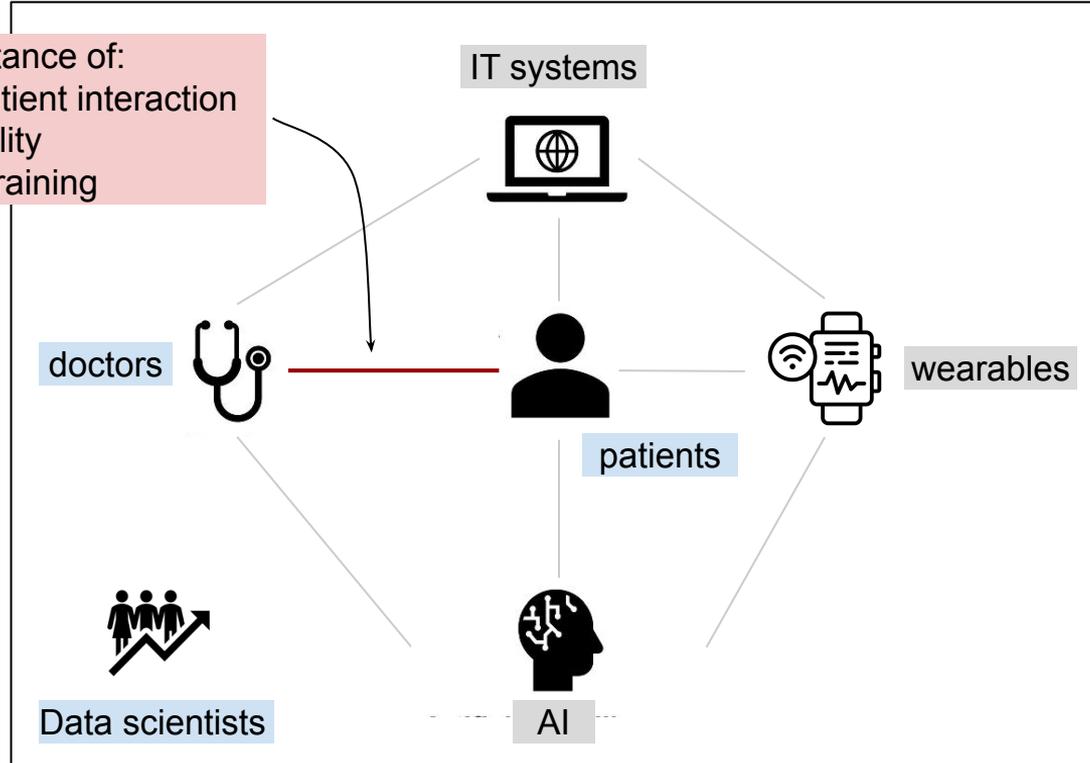

Multidisciplinary is the new paradigm: the “datascope”

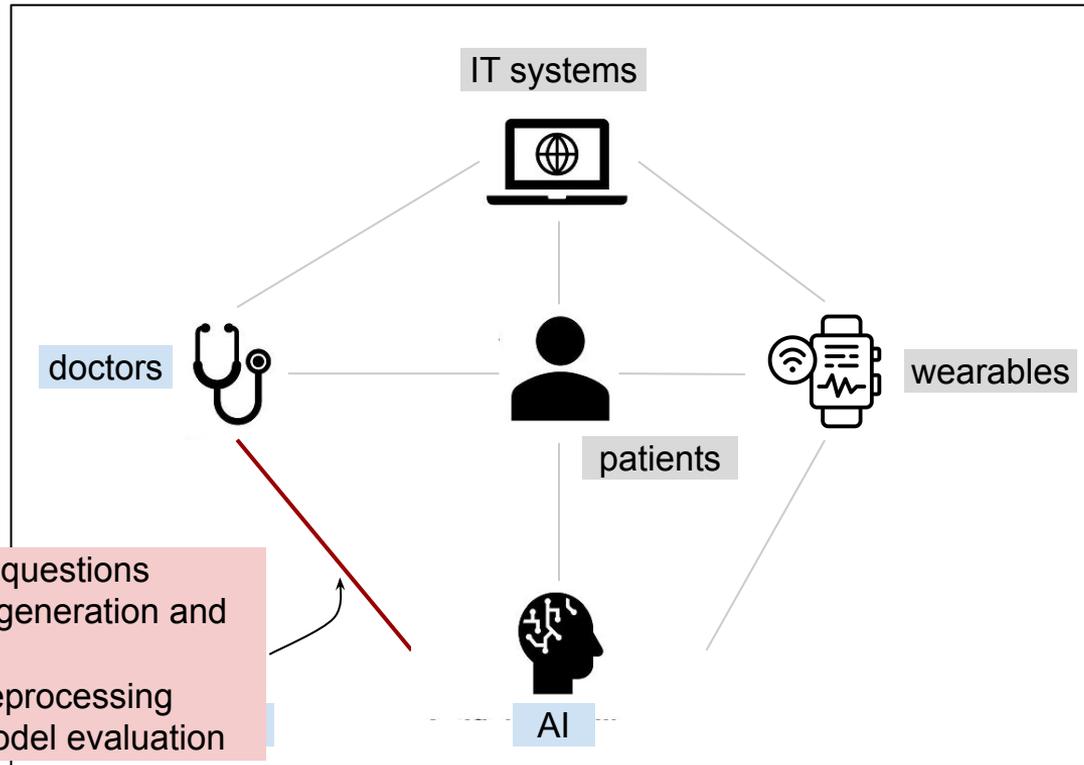

We call for a health-data-informed clinical workforce

Reconsider the importance of:

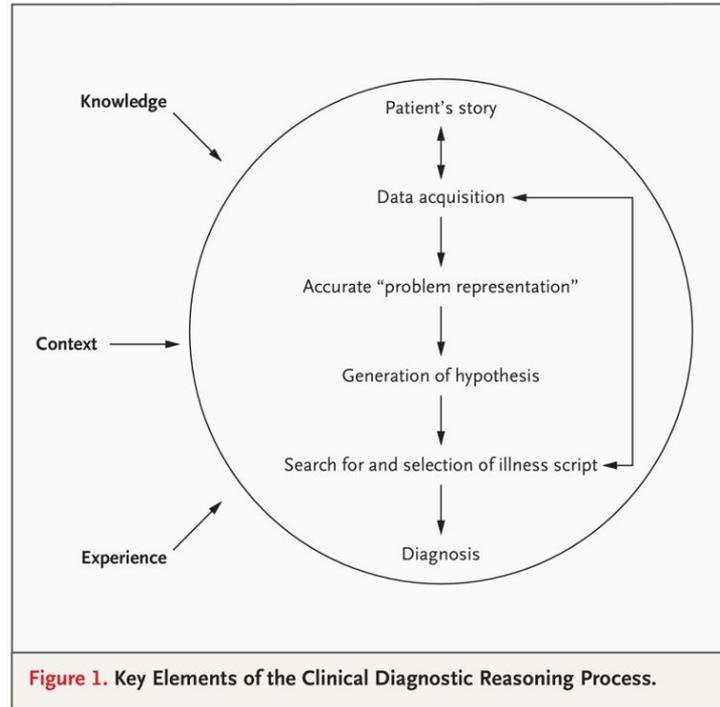

- Data-diligent patient interaction
- Scientific reliability
- Statistics core training

Doctors should stay in the loop

Human intelligence + Artificial intelligence

We would like to express **our deepest gratitude** to

 **doctors** who contributed to the labeling with their expertise.

 **participants** who donated their voices and other information.

 **researchers** who actively evolved and supported the project.

 **audience** today for your valuable questions and feedback.
