

# Innovative Business Cases & The Internet of Things

or

How to put Linear Types, Control  
Theory and Bigraphs into one neat  
storyline

---

Jon Crowcroft,

<http://www.cl.cam.ac.uk/~jac22>

<http://hubofallthings.wordpress.com/>

## Old school capitalism & socialism

---

- See *Future Perfect: The Case For Progress In A Networked Age* , by Steven Johnson

<http://www.amazon.com/dp/1594488207>

- There's a good case made for new ways of doing business
  - Not a *Legrand Star* or a *Hayek Hub*, but
  - A **Baran Web**....

## Taking sides...

---

- Alec Broers wants Big Companies
  - Like Intel, IBM, etc
  - ex IBM, VC Cambridge, now chair of house of lords ctee on S&T
- Andy Hopper likes what we do
  - Head of dept CL
  - 10 startups, 2 IPOd....
- Who do you believe?
  - Time for science (experiment w/ biz model)

# Cambridge has been doing new business cases for some time

---

- ARM
  - Mostly fabless chip designer
  - More chips than intel out there...
- RealVNC
  - Open source desktop virtualisation
  - Millions of users...
- Ubisense
  - Actually, fairly traditional h/w -> IPO
  - Used by BMW on production line.

## More radical

---

- Xen
  - Open Source - the Cloud (Amazon EC2)
  - Engaged with ALL of industry (not just 1 preferred initial customer)
  - Intel AND AMD
  - Microsoft and Sun/Oracle and HP ...
  - Acquired by Citrix for 500M USD.
    - Pretty much standard value in expertise
    - 50 kernel hackers with PhDs:)
  - Big 2nd customer was Tesco... ..

# More radical still

---

- Raspberry Pi
  - Charity
  - 500,000 units shipped in 6 months.
  - Doubled application rate to University CS
- BOB/HAT
  - Building Open Buildings
  - Internet of things - to be seen
- Digital Life Foundation
  - Signpost ... ..disintermediation
  - Open Source, decentralised, appstore

## BoB, e.g. HAT:Internet of Things

---

- Thing 1 - we need an app store to network legacy (and new) appliances
  - Commodity Appliance Thing
- Thing 2 - we need a new app store for people to contribute apps to federate (and isolate) Systems of Things
  - Home Appliance Thing
- See Dr Seuss for more details:  
[http://www.youtube.com/watch?v=fj\\_xwgLW\\_4I](http://www.youtube.com/watch?v=fj_xwgLW_4I)

# The D.E. in a HAT

An Alternative presentation

**A home tech platform  
What ever is that?  
The Hub of All Things  
Which we know as the H.A.T.**

**How to will it work?  
Well let me tell you,  
We collect data using things  
Named Thing 1  
And Thing 2**

**Thing 1 is a smart thing  
IoT ready you know  
We just need to name him  
And link him  
And then let him go**

**Thing 2 makes objects smarter**  
**With just a little finance**  
**Milk bottles, cups and kettle**  
**They let enhance**

**The things collect data  
Which algorithms analyse  
Contextual archetypes appear  
Right in front of your eyes**

**We learn from the home  
And from each other too  
We learn all about the things  
And what they tend to do**

**SMEs play at the HAT-Fest  
With the data compiled  
Creating novel offerings  
Which are deployed in the wild**

**The Hub of All Things  
We commend it to you  
We think it is the future  
We hope you do too**

# Internet of Things

---

- Need a grass roots (cottage industry)
  - Therefore need to give people tools
  - Equivalent of knitting needles+wool
    - Or sewing machines and thread (better)
    - Or even looms
- Hence need 3D Sculpters & Printers
  - But also need to give them **upload** capability
  - Moral equivalent of knitting pattern contributions made to magazines & books
  - But 3D CATs uploaded to websites
  - 3D HATs are easy (c.f. Fresnel project:)
- Hence need 3D scanners too

# Render Unnecessary

<http://fffff.at/free-universal-construction-kit/>

# Intellectual Property is Theft

---

- See aforesaid book for why
- Patents are not capitalism,
  - they are monopolistic
  - Long patterns incentivize companies to hide background longer term knowledge
  - 10 year pharma pattern is longer than the survival rate of someone's creativity
  - So blocks the sideways flow of innovation
  - Especially in methodologies

# Alternatives

---

- Xensource worked without IP protection because....
- A big incumbent cannot catch up with 5, or even 50 smart people working on an exciting new idea
  - Throwing 500 people (at MSR) doesn't work
  - Old news (c.f. Mythical Man Month)
- So novel S/W doesn't need any protection than raw speed of development

## Some possible exceptions

---

- Modest, but useful, genuine h/w innovations -
  - e.g. Dyson bagless vacuum cleaner
  - Patent lifetime perhaps could be shorter
  - Invention to market cycle\*2 == 5 years?
- Peer Patent Review
  - Deals with scale out of
    - Finding prior art
    - Detecting obviousness << patent >> sufficiency

# Employee Owned Business models

---

- Good karma
  - Works outside of business too
  - Incentive alignment without toxicity
- What if society is the employer?
  - So government is the employee
  - So how to use EOB in government?

# Conclusions, Discussion

- Today HAT, REMS, Ocaml Labs
  - <http://hubofallthings.wordpress.com/>
  - <http://www.cl.cam.ac.uk/~pes20/rems/>
  - <http://www.cl.cam.ac.uk/projects/ocamlabs/>
  - Platform (free), toolchain (free), service (tbd)
- Tomorrow,
  - World Peace and an end to Hunger?
- Live long and prosper
