Simon William Moore

Example Project Format

Part II Computer Science

X College

1995

Pro forma

Name	:	**Simon William Moore**
College	:	**X College**
Project Title	:	**Example Project Format**
Examination	:	**Part II Computer Science, 1995**
Word Count	:	**282**
Project Originator	:	Dr S. W. Moore
Supervisor	:	Dr S. W. Moore

Original Aims of the Project

To simplify the printing and binding of Computer Science Projects.

Work Completed

This document.

Special Difficulties

None.

List of Figures

Chapter 1

Preparing a LATEX 2ε document

1.1 Overview of the files

This document consists of the following files:

- `join.tex` — to glue the whole thing together

- `title.tex` and `proforma.tex` — the initial pages

- `chapter1.tex` — this chapter

- `chapter2.tex` — chapter 2 which presents the source for this document

- `refs.bib` — the bibliography

1.2 Building the document

This document was produced using LATEX 2ε which is based upon LATEX[1]. To build the document you first need to generate `join.aux` which, amongst other things, contains the references used. To do this type:

```
latex join
```

Then the bibliography can be generated from `refs.bib` using:

```
bibtex join
```

Finally, to ensure all the page numbering is correct run `latex` on `join.tex` until the `.aux` files do not change. This usually takes 2 more runs.
1.3   Adding graphics

Figure 1.1: Example figure

See figure 1.1 for an example of a floating figure.

1.4   Counting words

An approximate word count may be attained using:
```
detex join.tex | wc
```

1.5   Printing and binding

To convert the file to postscript use `dvips`. You may submit postscript to the book shop on a 1.44 Mbyte 3.5" DOS format floppy. They can also accept postscript compressed with `zip` but not `gnuzip` nor `compress`. However, it is faster for them if the file is not compressed.

Things to note:

- Ensure that there are the correct number of blank pages inserted so that each double sided page has a front and a back. So, for example, the title page must be followed by an absolutely blank page (not even a page number).

- Submitted postscript introduces more potential problems. Therefore you must either allow two iterations of the binding process (once in a digital form, falling back to a second, paper, submission if necessary) or submit both paper and electronic versions.

1.6   Further information

\section*{Original Aims of the Project}

To simplify the printing and binding of Computer Science Projects.

\section*{Work Completed}

This document.

\section*{Special Difficulties}

None.
```

2.4 chapter1.tex

```
\chapter{Preparing a \LaTeXe\ document}

\section{Overview of the files}

This document consists of the following files:

\begin{itemize}
\item {\tt join.tex} --- to glue the whole thing together
\item {\tt title.tex} and {\tt proforma.tex} --- the initial pages
\item {\tt chapter1.tex} --- this chapter
\item {\tt chapter2.tex} --- chapter~2 which presents the source for
this document
\item {\tt refs.bib} --- the bibliography
\end{itemize}

\section{Building the document}

This document was produced using \LaTeXe which is based upon
\LaTeX\cite{Lamport86}.  To build the document you first need to
generate {\tt join.aux} which, amongst other things, contains the
references used.  To do this type:

{\tt latex join}

\noindent
Then the bibliography can be generated from {\tt refs.bib} using:

{\tt bibtex join}

\noindent
Finally, to ensure all the page numbering is correct run {\tt latex}
on {\tt join.tex} until the {\tt .aux} files do not change.  This
usually takes 2 more runs.
```

```
\pagebreak % force LaTeX to do things my way :-)

\section{Adding graphics}

\begin{figure}[tbh]

\begin{center}
\scalebox{0.5}{\includegraphics{cuarms.eps}}
\scalebox{1}{\includegraphics{cuarms.eps}}
\scalebox{1.5}{\includegraphics{cuarms.eps}}
\scalebox{1}{\includegraphics{cuarms.eps}}
\scalebox{0.5}{\includegraphics{cuarms.eps}}
\end{center}

\caption{\label{egfig}Example figure}
\end{figure}

See figure~\ref{egfig} for an example of a floating figure.

\section{Counting words}

An approximate word count may be attained using:

{\tt detex join.tex | wc}

\section{Printing and binding}

To convert the file to postscript use {\tt dvips}.  You may submit
postscript to the book shop on a 1.44~Mbyte 3.5'' DOS format floppy.
They can also accept postscript compressed with {\tt zip} but not {\tt
gnuzip} nor {\tt compress}.  However, it is faster for them if the
file is not compressed.

Things to note:

\begin{itemize}
\item Ensure that there are the correct number of blank pages inserted
so that each double sided page has a front and a back.  So, for
example, the title page must be followed by an absolutely blank page
(not even a page number).

\item Submitted postscript introduces more potential problems.
Therefore you must either allow two iterations of the binding process
(once in a digital form, falling back to a second, paper, submission if
necessary) or submit both paper and electronic versions.
\end{itemize}
